Describe the present and original (if known) physical appearance

The St. Anthony Hotel is a 10-story masonry and steel-frame structure located on Travis Park in downtown San Antonio. The present design is the result of a series of remodelings which unified two early hotel towers, producing a uniform exterior appearance. The detailing of the hotel's exterior reflects the Spanish Colonial heritage of San Antonio, while the handsome interior spaces are more classical in their appearance and detailing.

The 10-story St. Anthony Hotel occupies an entire block facing the south side of Travis Park in San Antonio. The primary facade is situated on Travis Street, and includes the two main entrances to the hotel. At street level, the 10-story mass of the building steps out towards Travis Street in the form of a single-story unit forming an enclosed loggia across the front facade. The entrances to the hotel are positioned to each end of the Travis elevation. The west entrance is somewhat more elegantly detailed, primarily as it serves as a pedestrian entrance, with the east entrance designed for vehicular traffic. Both of these entrances are capped by segmental, stepped parapets derived from the 18th-century Spanish Colonial architecture of the region. The central section of the Travis Street elevation is formed by a series of eight arched openings shaded by a continuous molding carried by a series of Corinthian columns. The large, round-arch, glazed openings in this arcade configuration feature rather Baroque wrought-iron railings. The other street-level bays of the entry facade feature large, fixed sashes in classically detailed frames, with Ionic pilasters supporting segmentally arched pediments. The two entrances are protected from the rain by canopies hung from chains attached to the facade wall.

The main mass of the hotel, rising seven stories from the ground floor to the penthouse levels, is faced with tawny brick. Double-hung, one-over-one sashes are used throughout these intermediate floors. The planes of the facade walls are accentuated by a series of slight setbacks which relate to detailing found on the base and penthouse levels of the hotel. A simple cornice band divides the penthouse section from the rest of the hotel facade, featuring decorative inset panels at the corners and beneath the mock porticoes of the penthouse. The uppermost two stories of the hotel are faced with blonde brick, and are somewhat more elaborately detailed than what stands beneath them. A series of rather Baroque portico frames dominates this section of the hotel exterior, with one each on the east and west elevations, and three on the main north elevation facing Travis Street. These enframements step out slightly from the plane of the wall, and rise through the tiled hipped roof of the penthouse. Brick pilasters flank large square-headed window openings, and rise up to form finials in the parapet design above the windows and the tiled roof. The three enframements facing Travis Street feature grilled window openings to either side of the major opening. Such windows, with their wrought iron rejas, or grilles, were a popular element in Spanish Colonial Revival architecture, are very appropriate given the historical background of San Antonio. Beneath each of the large window openings of the penthouse level are decorative, blind panels of brickwork that appear as a balustrade beneath the windows, as if the space had once been an open loggia. The hotel is capped by a red-tile roof whose eaves project above the penthouse. The rounded profiles of the tiles adds another Spanish Colonial element to the building's exterior.

The major interior spaces of the hotel are concentrated on the first and second floors. Running parallel to Travis Street for most of the length of the hotel is the elegantly detailed Peacock Alley, the principal lobby space of the structure. This space is articulated
by a series of square piers and pilasters which support a heavily coffered ceiling. A modillioned cornice frames each of the coffers. The floor is covered in small, octagonal tiles laid out in a reflected pattern following the ceiling divisions. At the west end of the main floor is the main lobby area, with a curvilinear staircase leading to the mezzanine meeting rooms. This section of the lobby is somewhat more richly detailed than Peacock Alley, with very ornate pier and pilaster capitals. The largest meeting space is the Anacacho Room, which features a mezzanine with a wrought-iron balcony railing.

The present St. Anthony Hotel is the result of a series of building programs that began in 1909 with the construction of the original part, an eight-story block, located at the corner of Travis and Navarro streets at the west end of the present complex. The following year, an eight-story annex was constructed in the center of the block. These two sections were unified and enlarged to ten stories in 1935, with the final section of the hotel, the east block, being added in 1939-1941. These later building campaigns led to the creation of the present exterior and interior detailing and character of the hotel, with the Peacock Alley lobby space serving as the most important interior connection between what had been two separate structures. It is interesting to note that the latest addition included a multilevel parking garage, part of which is subterranean. While the hotel has undergone remodelings since 1941, there has been little change from the appearance of the building since that date.

Statement of Significance (in one paragraph)

Considered a decade ahead of its time when it was built in 1909, the St. Anthony Hotel represents San Antonio's early era of modernization and transformation. The hotel played an important role in transforming San Antonio into a modern city of the 20th century. The progressive business element of the city awakened at the turn of the century to the fact that San Antonio should actively pursue plans for future growth in order to compete with rival cities. San Antonio was recognized as a distinctive city because of its rich history, its interesting architecture, and its resort attractions. A group of enterprising men set out to provide the city with the necessary municipal, commercial, office, and hotel developments to compliment its historic and natural features.

Christened in honor of the city's namesake, San Antonio de Padua, the St. Anthony was an indication of the confidence being placed in the city and its future. Hailed by one writer as "...the Waldorf of the Prairie," the St. Anthony attracted distinguished visitors from all over the world--Douglas MacArthur, Will Rogers, Eleanor Roosevelt, Dwight D. Eisenhower, and John Nance Garner. It rapidly joined the ranks of notable hostleries.

Civic leaders began a campaign in the early 1900s to make San Antonio a paragon city of the new century. Accordingly, two prominent citizens and wealthy cattlemen, A.H. Jones and B.L. Naylor, financed the construction of the two initial towers and hired local architect, J. Flood Walker to design them. These men recognized the need for a luxury hotel that would cater to cattlemen and ranchers visiting San Antonio. A local author reported that the St. Anthony was one of the greatest factors in changing the status of Old San Antonio to a modern city. The San Antonio Daily Express of January 3, 1909, stated that the vast improvements in hotel facilities in the city during the year should not be underestimated, and that the new St. Anthony Hotel would strengthen the local realty market.

In spite of the Depression, Ralph W. Morrison bought the hotel in 1935. Morrison, an entrepreneur and civic leader, is noted for building, among other accomplishments, the first diesel locomotive which ran from Laredo to Corpus Christi. Under Morrison's auspices the hotel flourished and achieved its significant world-wide reputation for opulence and elegance. After architect John M. Marriot had completed the third phase of architectural alterations in 1935, the St. Anthony became the first hotel in the world to be completely air-conditioned and to have electric-eye doors. Later, the 1941 parking garage, located

in the third tower, offered the world's first drive-in garage and registration facility. Morrison's sophisticated influence manifested itself in the St. Anthony's interior as well. French Empire antiques decorated the lobby, oriental rugs adorned the floors, and original paintings by such noted artists as Cartier, McCann, Remington, and DeYoung were displayed throughout the hotel. Perhaps the best known is "Monarch of the Golden West," a painting of a mighty eagle by James Ferdinand McCann, an Irish artist who fell in love with Texas and settled in San Antonio. It hangs in the lobby. A rosewood and gold-leaf Stanwick piano, commissioned by the Russian Embassy in Paris in 1924, and purchased by Morrison in 1936 from the Russian Embassy in Washington, D.C., for $27,000, further creates the atmosphere of quiet elegance sought by Morrison. It is placed in the lobby.

After Morrison's death in 1948, the St. Anthony was operated by his trustees. In the 1960s, the hotel was once again renovated and the private St. Anthony Club was incorporated into the existing building. In 1971, financier William Osche purchased and redecorated the building.

Intercontinental Hotels Corp. acquired the St. Anthony in April, 1981. After being closed for 11 months, it officially reopened in May, 1983, after a 20 million-dollar restoration program was completed which highlighted the 1935-41 historic period, the era during which the most significant interior and exterior modifications occurred.

The integrity of the St. Anthony Hotel has been greatly enhanced by the latest restoration program. The St. Anthony is once again able to continue the fine tradition it established over its 74-year history. Its history and that of San Antonio are closely intertwined. The restoration of the hotel is just as important to the city today as its construction was prior to World War I, when it joined the Gunter and Crockett Hotels and office towers such as the Gibbs, Rand, and Gunter buildings to change the skyline of San Antonio. The St. Anthony Hotel is a major component of the redevelopment of downtown San Antonio.

- applicable criteria
- justification of areas checked
- relating significance to the resource
- context
- relationship of integrity to significance
- justification of exception
- other

It is stated in the nomination that the present appearance of the hotel was created during the 1935-1941 building modifications and that these building programs determined the historical character of the property. Therefore, the exceptional significance of the property must be explicitly justified and demonstrated to be of exceptional value to San Antonio's history, architecture, or culture. Please identify all properties in the region that portray the same values or historical associations and demonstrate how the St. Anthony Hotel represents the development of San Antonio. I.e., commercial development or checked on the nomination form.

Describe the present and original (if known) physical appearance

The St. Anthony Hotel is a 10-story masonry and steel-frame structure located on Travis Park in downtown San Antonio. The present design is the result of a series of re-modelings which unified two early hotel towers, producing a uniform exterior appearance. The detailing of the hotel's exterior the Spanish Colonial heritage of San Antonio, while the handsome interior spaces are more classical in their appearance and detailing.

The 10-story St. Anthony Hotel occupies an entire block facing the south side of Travis Park in San Antonio. The primary facade is situated on Travis Street, and includes the two main entrances to the hotel. At street level, the 10-story mass of the building steps out towards Travis Street in the form of a single-story unit forming an enclosed loggia across the front facade. The entrances to the hotel are positioned to each end of the Travis elevation. The west entrance is somewhat more elegantly detailed, primarily as it serves as a pedestrian entrance, with the east entrance designed for vehicular traffic. Both of these entrances are capped by segmental, stepped parapets derived from the 18th-century Spanish Colonial architecture of the region. The central section of the Travis Street elevation is formed by a series of eight arched openings shaded by a continuous molding carried by a series of Corinthian columns. The large, round-arch, glazed openings in this arcade configuration feature rather Baroque wrought-iron railings. The other street-level bays of the entry facade have large, fixed sashes in classically detailed frames, with Ionic pilasters supporting segmentally arched pediments. The two entrances are protected from the rain by canopies hung from chains attached to the facade wall.

The main mass of the hotel, rising seven stories from the ground floor to the penthouse levels, is faced with tawny brick. Double-hung, one-over-one sashes are used throughout these intermediate floors. The planes of the facade walls are accentuated by a series of slight setbacks which relate to detailing found on the base and penthouse levels of the hotel. A simple cornice band divides the penthouse section from the rest of the hotel facade, featuring decorative inset panels at the corners and beneath the mock porticoes of the penthouse. The uppermost two stories of the hotel are faced with brick, and are somewhat more elaborately detailed than what stands beneath them. A series of rather Baroque portico frames dominates this section of the hotel exterior, with one each on the east and west elevations, and three on the main north elevation facing Travis Street. These enframements step out slightly from the plan of the wall, and rise through the tiled hipped roof of the penthouse. Brick pilasters flank large square-headed window openings, and rise up to form finials in the parapet design above the windows and the tiled roof. The three enframements facing Travis Street feature grilled window openings to each side of the major opening. Such windows, with their wrought-iron rejas, or grilles, were a popular element in Spanish Colonial Revival architecture, are very appropriate given the historical background of San Antonio. Beneath each of the large window openings of the penthouse level are decorative blind panels of brickwork that appear as a balustrade beneath the windows, as if the space had once been an open loggia. The hotel is capped by a red-tile roof whose eaves project above the penthouse. The round profiles of the tiles adds another Spanish Colonial element to the building's exterior.
The major interior spaces of the hotel are concentrated on the first and second floors. Running parallel to Travis Street for most of the length of the hotel is the elegantly detailed Peacock Alley, the principal lobby space of the structure. This space is articulated by a series of square piers and pilasters which support a heavily coffered ceiling. A modillioned cornice frames each of the coffers. The floor is covered in small, octagonal tiles laid out in a reflected pattern following the ceiling divisions. At the west end of the main floor is the main lobby area, with a curvilinear staircase leading to the mezzanine meeting rooms. This section of the lobby is somewhat more richly detailed than Peacock Alley, with very ornate pier and pilaster capitals. The largest meeting space is the Anacacho Room, which features a mezzanine with a wrought-iron balcony railing.

The present St. Anthony Hotel is the result of a series of building programs that began in 1909 with the construction of the original part, an eight-story tower, located at the corner of Travis and Navarro streets at the west end of the present complex. The following year, an eight-story annex was constructed in the center of the block. These two sections were unified and enlarged to 10 stories in 1935, with the final section of the hotel, the east block being added in 1939-1941. These later building campaigns led to the creation of the Peacock Alley lobby space serving as the most important interior connection between what had been two separate structures. It is interesting to note that the latest addition included a multilevel parking garage, part of which is subterranean. While the hotel has undergone remodelings since 1941, there has been little change in the appearance of the building since that date.

DRAWING NOS.
GENERAL RENOVATIONS, FINAL SCOPE (REV. 15 July 1982)
VOLUME II, FACADE RENOVATIONS #A-1 thru A-5, EM-1 & 2
COLOR BOARD NO. 2 (13 July 1982)

DESCRIPTION:
General - In 1935 the original two separated reinforced concrete towers were incorporated as one building with a common facade. Floors 1 & 2 were covered with a St. Louis Roman, dark brown brick veneer capped by a tan, cast-stone water table. Floors 3 thru 9 were covered with a buff brick made in the San Antonio vicinity and capped by a large cast-stone cornice band. The 10th floor continued above with a cream brick veneer and a red Spanish clay-tile mansard roofing alternated with brick parapets.

The original Spanish Colonial revival influence seen in TOWER NO. 1 was retained and the First Floor architectural features of built-up brick pilasters with cast-stone caps, bow-arch brick headers over rectangular windows and cast-stone sills were extended. In addition, the Navarro Street facade was revised and a brick
colonade and covered walkway added. This feature is the only remnant of this 1935 period at the 1st & 2nd Floor facade other than the cast-stone pediment and copper canopy over the West Travis Street entry.

Statement of Significance (in one paragraph)

Considered a decade ahead of its time when it was built in 1909, the St. Anthony Hotel represents San Antonio's transformation from a border town into a modern city of the 20th century. The St. Anthony was significant to the commercial development of San Antonio because it provided the necessary hotel facilities for San Antonio's growing visitor and business population during the first two decades of the 1900s. More importantly, by 1935 it had become a source of civic pride and financial accomplishment, and was heralded throughout the United States as the greatest hostelry between New Orleans and San Francisco. The hotel's rehabilitation in 1982 provided another important contribution to the economic stability of San Antonio as a major component of the revitalization of the downtown. It is also historically and architecturally noteworthy because of the many innovations incorporated into its design and the sensitivity employed by various architects and planners during its four periods of construction and alteration.

The progressive business element of the city awakened at the turn of the century and again in the mid-1930s to the fact that San Antonio should actively pursue plans for future growth in order to compete with rival cities. San Antonio was recognized as a distinctive city because of its rich history, its interesting architecture, and its resort attractions. Enterprising businessmen set out to provide the city with the necessary municipal, commercial, office, and hotel developments to complement its historic and natural features.

The St. Anthony Hotel assumed its present configuration between 1935 and 1941, after it was purchased by Ralph Waldo Morrison, a distinguished businessman and entrepreneur who declared his love for the Alamo City and vowed to "give of his material aid to all matters having to do with the city's improvement." The St. Anthony's distinctive quality, which has been preserved throughout the years, was the direct result of Morrison's taste and personality.

When Morrison bought the institution, he found it in a deteriorating condition, struggling to remain open as were many businesses in San Antonio during the depression years. Owned by a Massachusetts Insurance Company who had foreclosed on the Mortgage, the Hotel required refurbishing and personal attention. Indeed, Mr. Morrison's decision to purchase the proud dame of hotels, the St. Anthony, and then to spend one million dollars on the project during a devastatingly depressed period was a daring step taken for the economic health of the local community, an indication of the confidence he placed in the city's future. Morrison's decision assured the preservation of the St. Anthony Hotel for future generations to enjoy.
Civic leaders began a campaign in the early 1900s to make San Antonio a paragon city of the new century. Accordingly, two prominent citizens and wealthy cattlemen, A. H. Jones and B. L. Naylor, financed the construction of the two initial towers and hired local architect J. Flood Walker to design them. These men recognized the need for a luxury hotel that would cater to cattlemen and ranchers visiting San Antonio. A local author reported that the St. Anthony was one of the greatest factors in changing Old San Antonio into a modern city. The San Antonio Daily Express of January 3, 1909, stated that the vast improvements in hotel facilities in the city during the year should not be underestimated, and that the new St. Anthony Hotel would strengthen the local realty market.

In spite of the Depression, Ralph W. Morrison purchased the hotel in 1935. The effects of the Great Depression came late to San Antonio and South Texas and never reached the financial depths found in the East. Nevertheless, the period from 1930 to 1940 was a trying and difficult one. Commercial activity decreased notably and the city's population grew very slowly, as verified by the United States Census Bureau figures of 231,542 in 1930 and 253,000 in 1940. Most local merchants faced hard times and many smaller stores were forced to close. By the mid 1930s San Antonio had slipped into third place behind Dallas and Houston. Its economy had failed to keep pace with those cities because it had previously grown as a mercantile and financial center geographically removed from other cities. San Antonio was the natural center of a large farming and ranching area, and its economy depended heavily on the related industries such as meat-packing, stockyards, and produce terminals. The emerging military establishments and the oil and gas operations further solidified San Antonio's regionalism.

Morrison, born in Missouri, developed his fortune in public utilities. In 1916, Mr. Morrison combined a group of small public utilities in Texas, Oklahoma, Arkansas, and Mississippi into the Central Power and Light Company with an office in San Antonio. The company operated directly or through its subsidiary central power stations, as well as gas, water, street railway and ice businesses in about 70 cities, serving more than 32,000 customers. In 1925, Morrison sold the business organization to the Middle East Utilities Company for $20,000,000. He is also credited with building the first diesel locomotive which ran from Laredo to Corpus Christi.

Under Morrison's auspices the hotel flourished and achieved its world-wide reputation for opulence and elegance. Morrison employed architect John M. Marriot to unify the two earlier towers (and a new third tower) with a common facade and lobby, and to add two floors to the lower, or 1909, tower.

The St. Anthony was a innovative institution from its inception, and Morrison insured its first-class status when it became the first completely air-conditioned hotel in the world. An atmosphere of quiet elegance pervaded the Hotel which was distinguished for its readiness to humor any fanciful desire that came into the head of a whimsical patron. It conveyed the impression of a well-run home rather than a "luxurious tavern."
In 1941, a fourth and final tower, which included a parking garage, was constructed, offering the world's first drive-in garage and registration facility. The garage permitted guests to drive their cars in and take an elevator to their floor without the necessity of going through the lobby.

Morrison's sophisticated influence manifested itself in the St. Anthony's interior as well. French Empire antiques decorated the lobby, oriental rugs adorned the floors, and original paintings by such noted artists as Cartier, McCann, Remington, and DeYoung were displayed throughout the hotel. Perhaps the best-known is "Monarch of the Golden West," a painting of a mighty eagle by James Ferdinand McCann, an Irish artist who fell in love with Texas and settled in San Antonio. It hangs in the lobby. A rosewood and gold-leaf Stanwick piano, commissioned by the Russian Embassy in Paris in 1924, was purchased by Morrison in 1936 from the Russian Embassy in Washington, D.C., for $27,000. It helps create the atmosphere of quiet elegance sought by Morrison, and is located in the lobby.

After Morrison's death in 1948, the St. Anthony was operated by his trustees. In the 1960s the hotel was renovated once again, and the private St. Anthony Club was incorporated into the existing building. In 1971, financier William Osche purchased and redecorated the building.

Intercontinental Hotels Corp. acquired the St. Anthony in April of 1981. After being closed for 11 months, it officially reopened in May 1983, after a 20 million-dollar restoration program which highlighted the 1935-41 historic period, the era during which the most significant interior and exterior modifications occurred.

The integrity of the St. Anthony Hotel has been greatly enhanced by the latest restoration program. The St. Anthony is able once again to continue the fine tradition it established over its 74-year span. Its history and that of San Antonio are closely intertwined. The hotel has continued to grow with the city, expanding in 1910, 1935, and 1941, with continued modernization in facilities. The restoration is just as important to the city today as its construction was before World War I, when it joined the Gunter and Crockett hotels and office towers such as the Gibbs, Rand, and Gunter buildings to change the skyline of San Antonio. The hotel is a major component of the redevelopment of downtown San Antonio, and is a designated City of San Antonio Historic Landmark.

Christened in honor of the city's namesake, San Antonio de Padua, the St. Anthony was hailed by one writer as "... The Waldorf of the Prairie." It attracted such distinguished visitors from all over the world as Douglas MacArthur, Will Rogers, Eleanor Roosevelt, Dwight D. Eisenhower, and John Nance Garner, to mention a few.

Architects

The St. Anthony Hotel seems to have been the most notable project for architects J. Flood Walker, John M. Marriot, and F. S. Jones, perhaps because very little is known of their work. All three designed substantial residences in the developing neighborhoods surrounding Downtown San Antonio.
Atlee and Robert Ayers, architects of the interior remodeling of 1959 are very well known throughout the State of Texas. The father-and-son team is remembered for such important structures in San Antonio as the Municipal Auditorium, Tower Life Building, Taj Mahal at Randolph Air Force Base, and an addition to the Menger Hotel. Their works generally incorporated Spanish Colonial elements; residences throughout the early 20th-century neighborhood called Monte Vista are testimonials to the excellent interpretation of the Spanish Colonial Revival in San Antonio.

Comments for any item may be continued on an attached sheet
Reviewer's Comments:

The building's period of significance dates from 1935-on when it achieved its current configuration. In this case, as noted in the return sheet of 11/16/83, the exceptional significance of the property must be specifically discussed in Item #8.

7. Description. The revised description statement is an excellent presentation which sets forth the history and development of the property.

8. Significance.

Justification of Areas Checked: Although much of the discussion in this section concerns the architectural development of the building from 1935-on, the category "architecture" and/or "engineering" is not checked. Given the innovative technological advancements of this property (first air conditioned hotel, first drive-in garage and registration facility) and the architectural design of the interior work, should either of these areas be checked?

If either case is to be made, it must be documented for exceptional significance within the context of San Antonio's hotel history and development. For example, were these technological developments illustrative of paramount events in the architectural history of the city? How do they reflect a conscious effort for new thinking in design when compared to other hotels of this time period? What relationship do they have to other buildings of the period of a similar type in the city?

Justification of Exception: Using the Area of Significance as Commerce, the nomination must explicitly state the exceptional value of the hotel to the historical development of the city. For example, what role did the hotel play during the Depression years in the city? Was it the only luxury hotel in the city during this time, and as part of that, was it the home of various significant events such as charity functions, etc., that had an exceptional role in the maintenance of the city's economy during this time? Does the hotel share fundamental associations with the historical development of San Antonio during the Depression and the early World War II years? Were the full facilities and entertainment amenities constructed to satisfy a specific local or traveling clientele that made a major contribution to the commercial and architectural development of the city? Since the form indicates that the Depression years were not as catastrophic for the City as other places across the country, were there other hotels in the city that were of a similar character? Was Morrison an exceptional figure within the Depression history of San Antonio?

Describe the present and original (if known) physical appearance

The St. Anthony Hotel is a ten-story, masonry and steel-frame structure consisting of four towers, located in Downtown San Antonio. The present design is the result of a series of remodelings which unified early hotel sections, producing a uniform exterior appearance. The detailing of the hotel's exterior reflects the Spanish Colonial heritage of San Antonio, while the handsome interior spaces are more classical in their appearance and detailing.

The ten-story St. Anthony Hotel occupies an entire block facing the south side of Travis Park in San Antonio. The primary facade is situated on Travis Street, and includes the two main entrances to the hotel. At street level, the ten-story mass of the building steps out toward Travis Street in the form of a single-story unit forming an enclosed loggia across the front facade. The entrances to the hotel are positioned at each end of the Travis elevation. The west entrance is somewhat more elegantly detailed, primarily as it serves as a pedestrian entrance, with the east entrance designed for vehicular traffic. Both of these entrances are capped by segmental, stepped parapets derived from the 18th-century Spanish Colonial architecture of the region. The central section of the Travis Street elevation is formed by a series of eight arched openings shaded by a continuous molding carried by a series of Corinthian columns. The large, round-arch, glazed openings in this arcade configuration feature wrought-iron railings. The other street-level bays of the entry facade feature large, fixed sashes in classically detailed frames, with Ionic pilasters supporting segmentally arched pediments. The two entrances are protected from the rain by canopies hung from chains attached to the facade wall.

The main mass of the hotel, rising seven stories from the ground to the penthouse levels, is faced with tawny brick. Double-hung, one-over-one sash windows are used throughout these intermediate floors. The planes of the facade walls are accentuated by a series of slight setbacks which relate to detailing found on the base and penthouse levels of the hotel. A simple cornice band divides the penthouse section from the rest of the hotel facade, featuring decorative inset panels at the corners and beneath the mock porticoes of the penthouse. The uppermost two stories of the hotel are faced with blonde brick and are somewhat more elaborately detailed than what stands beneath them. A series of portico frames dominates this section of the hotel exterior, with one each on the east and west elevations, and three on the main north elevation facing Travis Street. These enframements step out slightly from the plane of the wall, and rise through the tiled hipped roof of the penthouse. Brick pilasters flank large square-headed window openings, and rise up to form finials in the parapet design above the windows and the tiled roof. The three enframements facing Travis Street feature grilled window openings to either side of the major opening. Windows such as these with their wrought-iron
rejas or grilles were a popular element in Spanish Colonial architecture, and are very appropriate given the historical background of San Antonio. Beneath each of the large window openings of the penthouse level are decorative, blind panels of brickwork that appear as a balustrade beneath the windows, as if the space had once been an open loggia. The hotel is capped by a red-tile roof whose eaves project above the penthouse. The round profiles of the tiles add another Spanish Colonial element to the building's exterior.

The major interior public spaces of the hotel are concentrated on the first and second floors. Running parallel to Travis Street for most of the length of the hotel is the elegantly detailed Peacock Alley, the principal lobby space of the structure. This space is articulated by a series of square piers and pilasters which support a heavily coffered ceiling. A modillioned cornice frames each of the coffers. The floor is covered in small, octagonal tiles laid out in a reflected pattern following the ceiling divisions. At the west end of the main floor is the main lobby area, with a curvilinear staircase leading to the mezzanine meeting rooms. This section of the lobby is somewhat more richly detailed than Peacock Alley, with very ornate pier and pilaster capitals. The largest meeting space is the Anacacho Room which features a mezzanine with a wrought-iron balcony railing.

In 1935, the two reinforced concrete towers—tower 1 built in 1909 and tower 2 built in 1910—were incorporated into one building with a common facade. Two additional stories were added and a third major tower was constructed. Spanish Colonial Revival details evident in the earlier structures were repeated. Also, a brick colonnade and covered walkway were added to the Navarro Street facade. The hotel became recognized as a "world-class" hostelry.

In 1941, the fourth and final ten-story tower was constructed. The hotel covered an entire city block, extending from Navarro to Jefferson streets. The addition included an innovative drive-in parking garage, which was situated in the basement and the first five floors with guest rooms, which were located on the top five floors. The original ballroom in tower 2 became the Peraux Room, and an elaborate new ballroom named the Anacacho Room was located in this new section. While sympathetic in form, style, and materials to the 1935 sections of the hotel, tower 4, by virtue of its construction date, cannot be considered as being a contributory element of the nominated structure. Since 1941, the St. Anthony has undergone a continuous modernization program; however, the changes have been largely cosmetic.

**Statement of Significance (in one paragraph)**

The present St. Anthony Hotel, consisting of four towers, is the result of a series of building programs that began in 1909 with the construction of the initial section, an eight-story structure located at the corner of Travis and Navarro streets. Already recognized for innovative features during the decade after the turn of the century, the St. Anthony received its greatest notoriety in 1935 after Ralph W. Morrison, an energy magnate, purchased the property. The purchase of the hotel during the Depression for the large sum of $475,000, was significant commercial act in San Antonio. The subsequent million-dollar expansion, refurbishing, and redecorating program was an even greater economic boost to the city because it strengthened the depressed local realty market when help was desperately needed. Morrison's building program, involving seventy-five percent of the present hotel (towers 1, 2, and 3) was completed in 1935. The work altered the configuration of the hotel while retaining the Spanish Colonial revival influences of the earlier sections. The hotel configuration has remained the same since that period except for the addition of a final ten-story tower containing guest rooms and a drive-in garage, which was completed in 1941. Although the fourth tower was not completed until 1941, the use of the same building materials and the continuation of the Spanish Colonial Revival detailing created a unified hotel complex extending the entire city block. Throughout the years, modernization and redecorating programs have been undertaken. During the 1935 building program, Morrison created a world-renowned hostelry similar to the resort hotels located in California and Florida; in fact, the St. Anthony was the only "luxury" hotel operating in San Antonio during the Depression, which was clearly the most important period in the history of the hotel. Morrison established the hotel as a symbol of quality development, growth, and civic pride. This tradition has continued for over fifty years, during which the hotel has attracted to the city distinguished visitors such as Douglas MacArthur, Will Rogers, Eleanor Roosevelt, and Dwight D. Eisenhower. The restoration program, completed by InterContinental Hotels Corp., in 1983, re-emphasized the importance for the hotel of the 1935 period. In the 1930s, the St. Anthony Hotel played a role in the transformation of San Antonio into a major urban center. Once again, its importance cannot be diminished; it is a major component of the redevelopment of Downtown San Antonio.

The Great Depression of the 1930s came late to Texas, and its effects were not as devastating as in other parts of the country, but it was a trying and difficult era. San Antonio's population grew very slowly—less than one percent a year as verified by the United States Census Bureau,

Chief of Registration
which recorded 231,542 people in 1930 with an increase to only 253,000 in 1940.\(^1\) Building and commercial activities decreased notably and by the mid-1930s, and San Antonio slipped into third place in Texas behind Dallas and Houston. As a regional mercantile and financial center dependent on natural resources such as cattle, agriculture, oil and gas, San Antonio's economy had failed to keep pace with those younger, rapidly expanding cities.

Morrison's purchase of the hotel during the Depression was important, but the fact that he immediately began a million-dollar refurbishing and expansion program was even more dramatic. Morrison acquired the hotel for $475,000 in February of 1935, from Western and Southern Life Insurance Company, a Cincinnati, Ohio, corporation who had been forced to foreclose on the mortgage.\(^2\) The hotel was in a deteriorating condition, struggling to remain open, as were other hotels in the city. Morrison's investment transformed the St. Anthony into a luxury hotel. By providing superior hotel facilities, San Antonio was better equipped to accommodate tourists, ranchers, military officials, and oil and gas representatives, many of whom were coming to the city because of its location at the crossroads of several major rail lines. The St. Anthony Hotel dominated the market and became a local attraction. Often the names of the city and the hotel were used interchangeably.

A Federal Writer's Project report stated that no important improvements were undertaken in the city until the advent of the Works Progress Administration in the mid-1930s.\(^3\) The San Antonio Express reported on March 9, 1935, that "when the St. Anthony Hotel construction began it would be San Antonio's first major downtown project using private funds to begin in the last five years." It is evident that Morrison made it possible for the hotel to become a leader in the business which, in turn, aided the city's depressed economy. Also, he preserved the St. Anthony for future generations to enjoy.

Morrison's building program included the addition of two floors to the existing two towers, the construction of a third tower of ten stories, and the incorporation of the towers into one building with a common facade and lobby thereafter known as Peacock Alley. Also, new materials were introduced to solve an engineering problem created by the addition of two more floors to the original buildings. The well-known San Antonio structural engineer, Willard E. Simpson, used gypsum planks and a light steel structure to help decrease the load on the foundation.\(^4\) The hotel reportedly became the first completely air-conditioned hotel in the world. It contained a set of three elevators with brass doors and electric eyes. The renovation project was completed by November of 1935.\(^5\)
Morrison's sophisticated influence manifested itself in the St. Anthony's interior as well. French Empire antiques decorated the lobby, oriental rugs adorned the floors, and original paintings by such noted artists as Cartier, McCann, Remington, and DeYoung were displayed throughout the hotel. Perhaps the best known is "Monarch of the Golden West," a painting of a mighty eagle by James Ferdinand McCann, an Irish artist who fell in love with Texas and settled in San Antonio. It now hangs in the lobby. A rosewood and gold-leaf Stanwick piano, commissioned by the Russian Embassy in Paris in 1924, was purchased by Morrison and placed in the lobby, further creating an atmosphere of quiet elegance.

A writer described the St. Anthony as "the Waldorf on the Prairie...which was distinguished, among other things, for its readiness to humor any fanciful desire that comes into the head of a whimsical patron." He attributed the St. Anthony's quality to the taste and personality of its owner, Ralph Morrison, a "big reticent, amiable industrialist."

In addition to the Hotel, the property included a power plant located in another building in the block immediately west of the Hotel. A tunnel connected the power plant to the Hotel. An old-time utility operator, Morrison reworked the power plant to provide electricity to the Hotel. When the San Antonio Public Service Company reminded Morrison that there was a city ordinance prohibiting private power lines from crossing a public street, Morrison acquired a charter and sold electricity at reduced rates to other buildings in the block. The Public Service Company purchased the power plant from Morrison. The contract included a clause to the effect that if his rates for electricity ever increased to a figure Morrison considered unreasonable, he would buy back the plant for what he had sold it. The power plant no longer exists, but the tunnel still remains.

After Morrison's death in 1948, the St. Anthony was owned and operated by trustees of Morrison's Hotel Company until 1971, when financier, William Ochse purchased the Hotel. InterContinental Hotels Corp. acquired the St. Anthony in April, 1981. After being closed for 11 months, the Hotel officially reopened in May of 1983. A $20-million restoration program highlighted the 1935 historic period, the era during which the most significant exterior and interior modifications occurred.

Substantive Review: 

Reviewer's comments: This is a rather complex nomination due to the fact that the building has been altered significantly over the years. Tower A, built in 1911, is to be considered a non-contributing element of the nominated property. Significant alterations were also made in 1935, but the nomination points out that the 1935 work comprised a major part of the downtown redevelopment in San Antonio. It involved the expenditure of a lot of money during the depression era.

Nomination returned for: technical corrections cited below
substantive reasons discussed below

1. Name
2. Location
3. Classification
   Category
   Ownership
   Public Acquisition
   Status
   Accessible
   Present Use
4. Owner of Property
5. Location of Legal Description
6. Representation in Existing Surveys
   Has this property been determined eligible? yes no
7. Description
